This manual should be considered as a formal part of your motorcycle and should always stay with it even at resale.

This chapter shows some rules you should follow through driving:

- It is necessary to consider all the requirements provided by law (license, plates, etc.)
- It is recommended that while telling confident with your motorcycle driving through low transit areas
- Never lend your motorcycle to learner, most of the accidents occur due to the lack of experience of driver
- Do not drive under the use of alcohol, drugs or medical treatment than can cause drowsiness
- Respect norms of transit and signs
- Make sure to wear helmet, gloves and protective clothing
- Drive with both hands and keep feet on the stirrup
- Drive should not get distracted (by smoking, drinking, reading, eating, etc.)
- Check vehicle periodically (oil, fuel, etc.)
- The motorcycle is designed to hold two passengers.

**LUGGAGE**

- Luggage must be fixed
- Performance and steadiness of loading are different from not loading
- Luggage must be fixed with rubber strip or rope

Weight of luggage is limit to the simulated amount.

LEFT HANDLE
1) Horn switch
   - Pressing the switch, horn switch rings
2) Switch for direction light
   - Slide switch left to turn left. Slide switch to the right when turning right and push in the switch and the light will be shut
3) Changing light switch
   - Distant light- Switch to, light of head light goes upward
   - Near light- Switch to, light of head light goes downward.
4) Flashers switch
   - Pressing the switch, indicates which signal is flashing, right and left

RIGHT HANDLE
1) Electrical starter switch
   - Press electrical starter switch, limit time of pressing electrical switch is 5 seconds
   - If engine does not turn on try again within a gap of 30 seconds
2) Lights
   - Slide switch to left up to first level and quarters will turn on.
   - Slide once more to next level and full lights will turn on
1. ON (opening)
   Engine can be started
   Switch lights on work normally
   Horns works
   keys cannot be dropped out

2. OFF (closing)
   Engine is stopped
   Lights cannot be used
   Horn not working
   Engine will not start
   keys can be dropped out

3. LOCK
   Direction lock is locked
   lights cannot be used
   Horn will not work
   Keys can be dropped out.

OPERATION

LOCK
Please lock your direction lock when leaving your vehicle

1. Please turn handle bar to the limit position

2. Press tightly key and turn key from position OFF to the position lock

3. Draw the key out

Advice:
Please try turning the handle bar to ensure the vehicle to be locked

How to open direction lock

1. Push in the key to position OFF.
SEAT LOCK

Opening and closing of seat lock

1. Push in key and turn to left to open the seat lock

2. Lift the bottom of seat and open it

Drop seat, press it lightly and then you can lock the seat

Advice:
Lift seat lightly to ensure the seat is locked.

LUGGAGE BOX

1. Before using luggage box, please open the seat

2. Open seat an you will find the luggage box which can hold 10kg

Operation manual and other documents can be put there.

Attention:
Food easily affected by temperature and combustible materials cannot be put in luggage box for high temperature or engine heat and sunshine.

Advice:
Do not put expensive goods in luggage box when leaving vehicle

Water may enter luggage box in rainy days or vehicle being washed, if so, more attention should be paid to the expensive goods if you put them in.
FRONT BAG

Front bag can hold goods about 1.5kg.

How to use front bag
1. Push in key, and turn to left to open lock buckle
2. Open bag
3. Please make use of the rubber strip rope or button.

FUEL TANK

1. Push in key and turn to left to open the seat lock
2. Turn cap, fuel tank to left and drop it out
3. Add Unleaded fuel to it
4. Drop seat, press it lightly and then you can lock the seat.

TANK CAPACITY
6.0lts.

Warning:
- Fuel is combustible material and can cause fire under some conditions
- When loading fuel, should be in ventilated areas and with engine OFF

Avoid skin contact, inhaling or ingestion with fuel.
BEFORE STARTING THE ENGINE

1. Check whether fuel and oil are enough
2. Set the kick leveler (main support)
3. Driver must stand on the left of the vehicle.

Do not start engine in airless or airtight room for waste was including poisonous elements which can cause death.

WHEN STARTING THE ENGINE

1. Turn the switch to ON position
2. Nip the rear brake lever
3. Hold steering handle and then press electric starter switch
4. Do not make any rushing out with cold engine, it is recommended to warm it out, driving at a limited speed during the first kilometers of the ride.

USE KICK STARTER ENGINE

1. Turn main switch to ON position
2. Step on the kick starter lever for ably.

Advice:
Turn the kick starter lever back after starting engine.
HOW TO RIDE

1. Turn main support back:
Nip the rear brake with left hand and
grasp support handle with right hand,
and then push the vehicle forward so
as to turn main support back.

Advice:
In order to turn main support back,
do not grasp seat.

2. Side the vehicle:
Hold the handle bar with both
hands, stride the vehicle from left side.
Sit straightly and your left foot cannot be
of the ground.

3. If driving with passenger open back
stirrup, if not keep them closed.

Caution:
In order to prevent it from rushing out,
please nip the rear brake till the vehicle
starts.
Do not increase the engine speed
without any reason before riding.

4. Loosen the rear brake, rotate the
steering handle slowly, and then the
vehicle will begin to work.

SPEED ADJUSTMENT

Use steering handle to adjust speed:

1. To the driver:
Speed is more and more faster to the
driver.
2. Against the driver:
Speed is more and more slower against
the driver.
BRAKE SYSTEM

Please loosen female nut in advance and then hold front and rear brake bar together.

Hold front and rear brake gradually is the proper way to operate.

If needed to brake during uphill use both hands do not try to maintain by speeding or damage will be caused.

Warning:
- You should brake early in dump ground snowy ground or frozen ground where more time is needed than in dry ground
- Do not brake constantly during long downhill or damage will be caused.
- Check brake oil level constantly

PARKING

- Do not lean your motorcycle on walls
- Stand your motorcycle on steady floor
- Do not leave your motorcycle without surveillance, not with engine ON, nor with key on.
- Do not sit on your motorcycle while leaning on main support
- Avoid touching any components that may be hot.
RUNNING
The motor running is fundamental to long lasting warranty and right operation of your motorcycle.

0 - 100Kms
- For the first 100km, operation with Engine Number caution on the brake and avoid using your brakes rushing out and at prolonged time. This will permit optimum operation.

Frame Number

0 - 500Kms.
- For the first 500km, Do not drive your motorcycle faster than 80% of the limit shown.

- Do not keep constant speed during long ridings at highways.

After 1000Kms.
- Speed up gradually your motorcycle until maximum performance has been reached.

IDENTIFY YOUR MOTORCYCLE
We recommend to write down motor number, frame number and grand in the space below for a better control of your motorcycle.

Engine Number
Regular check is necessary for using your motorcycle properly and preventing from accident.

Daily Check
Always remember to check your motorcycle carefully before everyday riding.

Regular Check
Take an overall check once half a year for better using performance.

Warning:
- Breakdown or accident may happen for lacking of regular checks.
- Regular check is required even if the motorcycle is lying idle.
- It is of great importance to check your motorcycle after longtime of lying aside.
- Check more frequently if motorcycle is being used under rainy or dusty conditions.

We recommend difficult checks to be held at local or nearest service center.

DAILY CHECK

Brake System
- Appropriate handle stroke and sensitive brake system.

Tires
- No crackle or damage
- No abnormal abrasion
- Proper depth of tire carving.

Motor Engine
- Enough engine oil
- Check if it run normally or any noise rising
- Check if it works well during speed accelerating and decelerating.
Here we only introduce some simple ways of checking and adjusting your motorcycle.

**BRAKES**

- Disk brake checking
  - Check from the backside of brake fixture if the disk abrasion reaches to the limits replace the two disks with new ones.

- Brake oil Replenishing
  - If brake oil level is lower than the limit replenish with brake oil DOT3 or DOT4.

- Pinch rear brake handle till resistance comes up, measure if the further stroke is in the stated range.
  - Adjust the stroke by turning the regulating nut right to increase the travel distance and decrease it by turning left.

Caution:
- Be sure to keep the foreae of the adjusting nut contact perfectly with the pillar surface of the pin.

Advice:
- Check the travel distance of the grip again after adjustment.
- Hold the brake grip tightly to check if the prolongation of indicating line falls in the specified brake limit.

- Keep brake oil away from cohering on the coating to avoid fading and chapping.
ENGINE OIL
For checking oil level
1. Keep the motorcycle on main stand on leveled ground
2. Remove oil level gauge, oil should be between Maximum and Minimum level
3. Add specified oil if required
4. Check engine oil level periodically

Caution:
- Adapting oil improper engine oil or oil with low quality may cause damage the engine.
- Use main stand at a flat ground
- Remember to change engine oil regularly

Engine oil replacement
1. Remove drain screw of oil cap
2. It is easier to drain the remains of the gearbox when the engine is warm
3. Tighten drain screw
4. Pour proper quantity of oil slowly into the gear box
5. Tighten the oil plug after fulfilling
AIR FILTER
Cleaning air filter must be done after every 1000kms, according to use.

If using motorcycle under dusty or wet conditions should cleaning be more frequently.

Remove the cover of the air filter.

1. Removal
   1. Keep motorcycle over main stand
   2. Loosed five screws to remove the cover of the air filter
   3. Clean filter with dissolvent and let it dry
   4. Put wick into clean engine oil
   5. Fix Wick and the shell.

   Caution:
   - Remember to replace the wick if it is worn out
   - Improper fixing of the wick may cause dust into engine, by which engine performance and usage life may be affected.

BATTERY
Check the electrolyte of the battery every 1000kms.

   Verifying your battery
   1. Make sure starter switch is OFF

2. Replenish the electrolyte of the battery timely except for the sealed on which needed no inspect.

   Caution:
   - Avoid splash fluid
   - Do remember not to remove the sealing plug of the battery.
FUSE
If any electrical component is not working or is working improperly or the engine does not turn on, check your motorcycle fuse.

Fuse Checking
1. Check fuse out of case, replace if damage.

Warning:
- Do not apply fuse with improper capacity

Caution:
- Replace the electrical appliances with original brand or other specified products, by which the performance of battery will be assured
- Do not rinse the surrounding part of fuse as strongly

Advice:
If the fuse is out of order just after replacement, go to a Vento service center immediately.

RINSE
Regular rinse is of importance to extend the usage life of your motorcycle
1. Sweep the dirt with cloth while rinse
2. Adopt neutral detergent and wash the motorcycle with water to get rid of dirt difficult to clean
3. Dry the remaining water with clean and soft rag.

Advice:
We recommend our users to apply mixed wax and pay attention to scrub the painting and plastic parts softly to prevent spot.

Caution:
- Do remember to clean the motorcycle after engine cooled.
- Keep water out of the muffler air-cleaner and electrical appliance to prevent rust
- Please rid carefully and slowly after washing your motorcycle by which brake performance may be affected.
It will return to normality after drying out
STORAGE

Caution:
Shield the engine and muffler with dust guard after the surface is cool.

Advice:
Please pay high attention to the following after long time of storage

1. It is of great importance to wax all parts to prevent rust

2. To preserve the battery and reduce leakage of electricity, please take out the battery and put it at a ventilating place without exposing to light or keep it inside with negative electrode cutting off

3. Do remember to drain off all the oil of the carburetor to prevent rust.

AFTER INACTIVITY

- Rinse your motorcycle

- Check battery charge and re-charge if needed

- Check oil and fuel levels

- Use a complete check out before using

Caution:
Test your motorcycle at moderate speed.
